

67th Annual Meeting Banff, AB

"A Voice for Everyone"

2013 Overall Learning Objectives

This meeting affords learners in the specialty of Otolaryngology - Head and Neck Surgery (including general and sub-specialty otolaryngologists as well as resident and medical student trainees) significant opportunity to attend sessions of interest and acquire further understanding in areas of perceived weakness in the specialty. All branches of the specialty including head & neck disease, laryngology, sinus disease, otology, neurotology, pediatric otolaryngology, facial cosmetic reconstructive surgery and medical education, are part of the program.

As requested by the delegates, there will be ample opportunity for enhanced dialogue and interaction with the various presenters, as this year increased discussion time has been implemented. Areas of advancing concepts in our specialty are presented through presentations by international guest speakers as well as in the general program through oral presentations and posters. A new "How I Do It" section as well as continuation of the workshop / mini workshop format, will give each learner practical and adoptable knowledge to use immediately in practice when they return home.

Review of feedback from the delegates of the 2012 CSOHNS annual meeting has resulted in capturing areas of interest briefly touched on in the past and now expanded as a result of this feedback, e.g. "*The mHealth Revolution: An Interactive Discussion of Mobile Technology in Otolaryngology*", as well as the continuation of previous workshops that the membership wished to be updated on, e.g. "*The Best Articles of the Last Year in Otolaryngology for the General Otolaryngologist*". New workshops will give attendees reinforced and new knowledge for improved care of their patients.
